“The color we used is a pattern that we felt created a softer presence in the landscape with more depth than a solid color.”

ResMed Corporate Headquarters

ResMed, a corporation that specializes in treating sleeping disorders, constructed a corporate headquarters complex on a former industrial site located in the middle of a mixed use residential community in San Diego, CA. At a cost of \$90 million, the headquarters consists of a 6-story mid-rise complex, attached to a 2-story low-rise structure and a 6-level parking garage, incorporating 230,238 square feet of total office space.

The overall vision for the building included the heavy use of art, and several rare and high-quality finishes throughout the building’s lobby, office space, cafe, health club and landscaping sets it apart from other Class-A office space in the area. High-quality Trespa Meteon® panels and other materials were incorporated into the exterior design to bring a unique character to the appearance of the building.

In 2009, ResMed Corporate Headquarters was recognized by the construction industry at-large with an Associated Builders & Contractors Excellence in Construction Award. The building won top recognition based on safety, craftsmanship, design, quality and technical considerations. ResMed recently received a Build San Diego Award, and has also garnered an Orchid Award from the San Diego Architectural Foundation (SDAF) for its artistic and integrated landscape design.

Trespa Meteon® and ResMed

Over 29,000 square feet of Trespa Meteon® was used as exterior rain screen cladding for ResMed Corporate headquarters. Meteon® was selected because, “We were looking for a material that we could employ rain screen construction for the healthy benefits of a breathable wall. The large scale module potential of Trespa was important in making the choice as well as the quality control possible with a panel fabricated off-site.”

Meteon® is rapidly becoming the cladding material of choice for architectural firms around the world for commercial, institutional and residential projects – large and small. Its durability, UV and weather resistance, ease of cleaning and designer color/texture selection is an unbeatable combination. Trespa Meteon® is also excellent for facade parts, balconies, interior lobby areas and numerous other applications.

The Design Firm

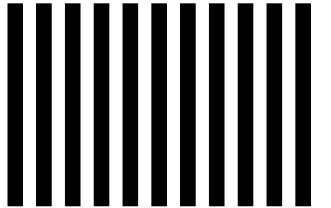

Since 1992, Davis Davis Architects has been a design practice focusing on the core concept that good design addresses multiple agendas – meeting functional requirements and responding aesthetically to the context and environment, while minding budgetary concerns of the client.

Their tight-knit, seven-person firm is known for their “hands-on” approach, and each team member devotes a great deal of personal energy to the design and management of each project. Drawing upon a network of consultants as needed, they are able to complete a wide range of buildings, from large scale structures to small detail work.

An award-winning architect, Bob Davis has more than 30 years of professional experience, and has designed a wide range of projects from office buildings to medical facilities; from private residences to major civic projects. The other “Davis”, Laurie Perriello Davis, also has vast professional experience that includes the design of books, furniture, and custom residences, as well as large scale commercial buildings. Both have taught design at major universities across the United States.
