About the Projects

For Isis and Hudson Hill, FXFOWLE developed exterior designs that give unique identities to the buildings within the very active urban context of Manhattan. In the case of Hudson Hill, the wood waves lend an outsized, welcoming presence to this midblock building. For Isis, a lively composition of finishes, textures and panel sizes in a dark green metallic color were used to change the building's appearance in various lighting conditions and viewpoints.

The Trespa Advantage

Trespa Meteon® has a unique blend of light and solid qualities. FXFOWLE was attracted to its lightness. Trespa is thin, taut and panelized. At the same time, its variety of colors and surface textures give architects the tools in which to develop solid, opaque portions of facades.

Isis & Hudson Hill Condominiums

Location: New York, NY
Application: Multi-unit Residential
Architect: FXFOWLE, New York, NY
Color: M35.7.1 Malachite Green (Isis)
